

## TRICHOMONIASIS IN WYOMING CY 2004

Dr. Jolley's laboratory tested 7,287 samples for *Trichomonas foetus* in calendar year 2004. Of these, 72 (1%) were positive. These included positive cultures from the 731 out-of-state submissions. The country with the most positive animals is still Fremont County (33 cases), followed by Sheridan (12), Carbon (3) and Weston (3).

These numbers stayed pretty consistent over the past few years. We typically see about 1% of submitted samples testing positive.
